DC24V WAVE MAKER PUMP WITH MAGNETIC MOUNT, PROGRAMABLE LCD DISPLAY CONTROLLER, 6 DIFFERENT WAVE MODES, AND 20 DIFFERENT FLOW RATES.

Aquatop's DC Wave Maker Pumps are powerful, highly efficient direct current wave making pumps that move and draw water in a unique way. The Prop-Style Impeller and 360° uniform water draw create a wider distribution of flow when compared to traditional powerheads. The Aquatop DC Wave Maker Pumps also include a strong, secure magnet mounting system which allows for flexible placement. Each model runs quietly and efficiently, with 6 wave modes and 20 flow rates for precise control. Two units can be synchronized wirelessly for enhanced water movement and circulation throughout your aquarium. The controller can even detect when the room is dark and automatically enter night mode.

FEATURES:

- Smart LCD Controller with 6 different wave modes and 20 different flow rate settings
- 10-minute Feeding Pause setting
- Selectable Automatic Night Mode detects darkness
- Super Quiet and energy saving Operation
- Powerful Magnetic Mount
- Link 2 Pumps together with a designated master controller
